Vasont Systems is a provider of content management software and data services backed by more than 50 years of experience in the information management and publishing industry. Its Vasont® content management system enables organizations of all sizes to create and manage their multilingual content once for multi-channel delivery. Organizations from a variety of industries, including manufacturing, technology, and healthcare, use Vasont to manage multilingual technical documentation, product manuals, and reference materials.

Products

Vasont Systems offers several content management models to provide organizations of all sizes with a system that best meets their needs.

Vasont Client/Server**—Provides licensed users with access to the dynamic system's functionality right from their desktops.

Vasont Web Application**—Empowers organizations with global offices, remote locations, intranets, or home-based workforces to control and manage their enterprise-wide content while creating an efficient and collaborative work environment.

Vasont ASP—Provides cost-effective access to Vasont's robust content management software and hosted content storage via a Web browser on a subscription basis.

Vasont SG—Offers a low-cost version of Vasont Client/Server that is tailored to address the needs of small editorial groups with limited resources.

Vasont Universal Integrator (VUI)—Enables authors and editors to access Vasont's functionality from the toolbar menu of their favorite XML authoring/editing software. VUI is an add-on module to Vasont.

**Vasont Systems offers a choice of payment options for its Vasont Client/Server and Vasont Web Application models. Organizations can purchase the software or take advantage of Vasont Systems' 24-month subscription option.

Service Offerings

Vasont Systems offers a variety of data services that complement its Vasont applications and provides additional support in solving organizations' content management challenges.

Data Analysis and Modeling—Vasont Systems transforms an organization's content into a structured format (i.e., XML) by studying the entire scope of its content and establishing meaningful components, ensuring well-defined content attributes and relationships.

Document Type Definition (DTD) Writing—After Vasont Systems analyzes an organization's data and determines a structure for the content, a DTD is created to define the rules of behavior for the content.

Vasont Software Training—Vasont Systems offers complete Vasont software training to its clients' users and system administrators. For the programmer or technical user, training is offered on the Vasont API, processing options, and Web application development. Vasont Systems also offers a variety of training courses and workshops to complement the Vasont content management applications, including: XML, HTML, and SGML; DTD creation and content modeling; DTD implementation; and structured authoring and editing.

V-Max1—Vasont ASP clients can benefit from the V-Max1 service, which provides a fast and efficient way to paginate and proof content. V-Max1 is most cost-effective for projects that are frequently edited, updated, and republished using repetitive text designs.
