Term	Definition	Synonyms
Aggregation	Activity for forming distinct sets of	
	content	
Analytics	Data that helps track business trends	Text analytics
	Records that describe part of a larger	
	domain	
	Sophisticated version of data	
Application	Vendor supplied add-on software tools	API
programming interface	to facilitate programming new features	
	or functional enhancements to integrate	
	a software product with other	
	applications	
Authority	Validating entity	
Authority control	Methods and lists employed for	
•	validating terminology and other	
	content normalizing values in data	
	maintenance	
Auto-categorization		See Categorization
Boolean searching	Use of explicit commands to limit or	
C C	narrow the scope of a search (AND),	
	expand its scope (OR), or exclude	
	explicit content (NOT). e.g. search for	
	content limited to containing both	
	"energy" AND "solar", where AND is	
	the command.	
Business analytics	Technique to visualize and analyze	
	business data to support decision	
	making	
Business intelligence	Technologies that gather, store, analyze	BI
	and make accessible data to help	
	enterprise users make better business	
	decisions. It includes decision support,	
	query and reporting, online analytical	
	processing, statistical analysis,	
	forecasting and data mining.	
	Enhancing data into information and	
	then into knowledge. Traditionally	
	focused on extracting and manipulating	
	data from structured databases	
	including numeric data. Viewed by	
	some as the umbrella for other	
	technologies including text mining and	
	analytics.	
Categorization	A computational or human activity	
	assigning labels to sets of content to	
	explicitly aggregate by label	
Citation	Information that accurately defines and	SEE ALSO Results
	describes a publication or data file;	

Glossary of Terms Related to Search and Text Retrieval

	structured bibliographic metadata	
Clustering	Process for gathering unstructured	SEE ALSO:
	content into a common space for the	Aggregation
	purpose of grouping it with content on	Categorization
	the same topic	
Collaboration	Describing shareable processes and/or	SEE ALSO: Social search
	content within an application.	
Concept search	Retrieval of content through automated	SEE ALSO: Semantic
	means that take contextual information,	search
	not just key words, into account when	
	determining the relevancy of the	
	content.	
Connectors	Software tools supplied by search	Adapters
	vendors or built internally to support	
	data exploitation by a search engine.	
Content	The target of search regardless of	
	format or medium. Everything included	
	in a collection of files	
Context	Surrounding content that elucidates and	
	clarified a set of data	
Controlled vocabulary	Terminology from approved lists used	SEE ALSO: Taxonomy
	for tagging content	Thesaurus Ontology
Crawling/Spidering	Computer programs, usually part of a	SEE ALSO: Indexing
	search engine, that traverse a specified	(Computer)
	set of domains for the purpose of	
	indexing all content encountered	
Cross-reference	Information that guides to another piece	e.g. synonyms, see also or
	of content. In a controlled vocabulary a	related terms (RT)
	term pointing to another term for	
	required or alternative usage in indexing	
	and for prompting during a search	
	dialogue.	
Data aggregation	Inclusion or clustering models for	
	heterogeneous data sets	
Data federation	Organized data state formed by merging	
	and normalizing a collection of similar	
	data objects	
Data mining	Computerized process for extracting	Data mining.
	content from structured repositories	SEE ALSO: Text Mining
Data normalization	Standardization of identical data	SEE ALSO: Normalization
	elements (reducing fields to the simplest	
	meaningful or workable structure).	
Data warehouse	A central repository or information	
	infrastructure that stores or logically	
	connects a collection of databases and	
	associated content with characteristics	
	and controls that enable sharing and	
	federated retrieval.	
Database	Repository of data organized by explicit	
	records and fields, or tables, rows and	

	attributes	
Digital asset	A type of content management that	DAM
management	automates the application of rigorous	
	governance rules for how the content is	
	created, modified, and maintained with	
	access controls.	
Domain	A corpus of content bounded by system	
	architecture definitions.	
Dublin core	A standard 15-element metadata	SEE ALSO: Metadata
	element set maintained at	
	http://dublincore.org/ as a baseline for	
	content.	
Embedded search	Retrieval algorithms delivered as a part	
	of a software application for searching	
	the content within the application.	
Enterprise search	Software used to index and retrieve	
	content that exists within or for an	
	organization, ideally optimized for	
	specific enterprise business	
	requirements.	
Entity extraction	A process of content analysis by which	
	the software identifies and classifies	
	data by type or attribute for the purpose	
	of creating metadata from unstructured	
	content.	
ETL	Extract, load and transform suite of	
	algorithms or programs	
Extractors	Software programs that harvest data	
	content from databases, files or other	
	applications, usually for the purpose of	
	then manipulating the data for eventual	
	exposure to other applications or search	
	engines.	
Faceted navigation	In a search interface, the exposure of a	Guided navigation
-	controlled terminology list with facets	-
	(classes of concepts) with drill-down	
	(broader to narrower) capabilities to	
	facilitate moving through the facets to	
	obtain different groups of content	
	results.	
Federated search	Process of retrieving content either	See also Federation
	serially or concurrently from multiple	
	targeted sources that are indexed	
	separately and presenting results in a	
	unified display.	
Federation	Expansion of the concept of	
	aggregation. It has play in a multi-	
	domain environment (internal sites or a	
	mix of internal and external). Across	
	I IIIIX UI IIIIGI IIAI AIIU EXICIIIALI ALIUNN	

	 functions: Integration of the results from a number of targeted searchable domains, each with its own search engine Disambiguation of content results when similar but non-identical pieces of content might be included Normalization of search results so that content from different domains is presented similarly Consolidation of the search operation (standardizing a query to each of the target search engines) and standardizing the results so they appear to be coming from a single search operation 	
Filtering	Applying other search criteria to narrow or alter the results of an existing search or stored search strategy.	SEE ALSO: Boolean searching
Full text search OR	Retrieval of strings found within the full	Full text retrieval; free text
"free" text	content of a collection of filesContent retrieval algorithms that have	search; unstructured search
	rules for what content is relevant to match a query. (e.g. finding all words that are alternative grammatical forms of <i>elevate</i> or mean the same thing as <i>elevate</i> .)	
Histogram	Frequency distribution display or model – visualization presentation	
Hosted search	Retrieval software is installed and supported on computing infrastructure that is maintained by the vendor; search algorithms operate from that host on user-controlled content, which may or may not reside permanently on the host.	Often supported by host's Software as a Service or SaaS.
Index	Systematically arranged list; in computerized systems it is a representation of content to speed retrieval by the governing algorithms.	
Indexing	A human intellectual process for organizing content to optimize retrieval. A computerized process for organizing content to optimize retrieval	
Integrated information system	Connected data structures and workflow procedures with common features supporting a unified architecture and operational method.	
Interface (Search)	The architecture controlling the methods and design through which a	

	user executes a search.	
Keyword	Non-controlled terminology; language	
	extracted from the content literally	
Keyword search	Query request for literal text as crawled	
5	and indexed by a search engine	
Knowledgebase	A domain specific data repository of	
illio wiedgeedde	facts or rules accessible in machine	
	readable format to support software	
	applications	
Link	URL address explicitly connecting	Hyperlink
Link	content in one location to content in	пурстнік
	another (my be within a document, site,	
т 1	or remote)	
Loaders	Software applications designed to	
	transfer data from one database to	
	another often coupled with transformers	
Metadata	Explicitly defined labels for structuring	Properties, Bibliography
	content that describes any document or	SEE ALSO: Citation
	file regardless of the native format.	
Natural language query	Search expressed as a question by a	NLP
	native speaker who asks for information	
Navigation	Method of traversing content with a	
e	device (e.g. mouse), or accelerator keys	
	through a structured layer of content to	
	reach other content (e.g. drilling down	
	through a taxonomic structure)	
Normalization	Process or processes to create uniform	SEE ALSO: Data
ivormanzation	format, language, and structure for data	federation Federated
	that needs to be consistently and	
	-	search Federation
	meaningfully stored in a database	
	and/or aggregated and federated upon	
0514	retrieval.	
OEM	Original equipment manufacturer; used	
	to explain relationship of a supplier to	
	another organization whose product is	
	embedded in the delivered application.	
Ontology	An assembly of concepts in which all	
	possible relationship that might exist	
	between and among concepts is	
	explicitly mapped	
Open source search	Retrieval software available without	
engine	licensing costs and customizable by the	
-	acquiring organization or by a third-	
	party. e.g. Lucene	
Parametric search	Interface architecture supporting the	
	selection of multiple variable criteria in	
	a single search pass. e.g. to find all	
	products within a class, with specific	
	properties, and applied to select	
	industries.	

Personalization	Self management of the software	
1 CISOHAHZALIOH	application's interface	
Phrase search	Retrieval query specifying explicit	
r mase search	adjacency of two or more terms in the	
Portal	order expressed in the query.	
Portal	Web-based page of links serving as	
	points of entry to specific content, other	
	web sites, and applications.	
Prompt	Interface symbol or text indicating that	
	a user response is required to proceed	
D	with the transaction	
Repository	A database or file structure for	
	electronic content; Entity within a	
	searchable domain	
Results	The citations or partial content of data	
	retrieved in a search	
Retrieval	Process of accessing content through	
	the act of searching	
Search	Process classification for all software	
	designed to retrieve content.	
Search appliance	Hardware bundled with search software	
	designed to be plugged into an existing	
	computer infrastructure to begin the	
	process of crawling and indexing target	
	content within a network.	
Search engine	Software with algorithms specifying	
·	how data is to be retrieved from one or	
	more indices.	
Search intermediary	Individual who interprets what a user	
5	wants to find and performs retrieval	
	operations on behalf of the user.	
Search platform	Suite of software products that together	
1	enhance simple index searching with	
	additional functions related to content	
	(e.g. transformation, analysis, reporting)	
Searching	Using retrieval software or a non-	
	automated process for finding content	
Security	In a search environment, the search	
Socarry	engine functions that support access	
	controls to content through	
	authorization validation.	
Semantic search	Use of natural language or meaningful	
Semantic Search	queries to find content through retrieval	
	software designed to understand	
	linguistically meaningful questions and	
	the target content.	
Site search	Option using navigation or a search box	
Site search	to retrieve only content from a specific Web site (URL) domain.	

	environment to share and annotate	
	search results using collaborative	
	features.	
Sort	Arrange or order data in a defined	
	sequence.	
Stemming	A form of fuzzy search logic that	
	reduces a word to its fundamental root	
	and looks for any word with that root.	
	(e.g. a search for <i>stemming</i> would also	
	retrieve stem, stems, and stemmed)	
Structured content	Data stored in a database or explicit	
	metadata stored in a software	
	application	
Structured search	Use of pre-defined forms or explicit	SEE ALSO: Parametric
	commands to give bounds to query	search Boolean search
	criteria and parameters. (e.g. restricting	
	the search for a word to the title field)	
Tag and tagging	Use for semantic labels or functional	
	tagging that indicates the purpose of a	
	topic or conceptual string. Different that	
	cataloging in which metadata values are	
	being assembled congruently to the	
	content. Tags usually reside embedded	
	in the content.	
Tawanamat		
Taxonomy	Hierarchically ordered list of	
	terminology approved for tagging or	
	categorizing a corpus of content. Also,	
	often exposed in the search interface to	
	form the framework for navigated	
	search.	
Text mining	Extracting interesting and non-trivial	Information extraction,
	information and knowledge from	Intelligent text analysis,
	unstructured text. Interdisciplinary field	Text data mining,
	that draws upon:	Knowledge discovery in
	 Information retrieval 	text
	Data mining	
	Machine learning	
	Statistics	
	Fact extraction	
	Computational linguistics	
Thesaurus	A list of terms that are assigned simple	
Thesaurus	A list of terms that are assigned simple relationships, cross references, scope	
Thesaurus	e 1	
Thesaurus	relationships, cross references, scope	
Thesaurus	relationships, cross references, scope notes, usage notes and other directives. A thesaurus is often more	
Thesaurus	relationships, cross references, scope notes, usage notes and other directives. A thesaurus is often more comprehensive than a taxonomy but	
	relationships, cross references, scope notes, usage notes and other directives. A thesaurus is often more comprehensive than a taxonomy but less complex than an ontology.	
Thesaurus Trackback	relationships, cross references, scope notes, usage notes and other directives. A thesaurus is often more comprehensive than a taxonomy but less complex than an ontology. A URL from one piece of content to the	
	relationships, cross references, scope notes, usage notes and other directives. A thesaurus is often more comprehensive than a taxonomy but less complex than an ontology.	

	systematically change data.	
Unstructured content	Content not organized in a formal	
	structure; files not in a database (e.g. a	
	Word document)	
Visualization	Graphical or image representation of	
	data to reflect some understood	
	relationships that reflect information or	
	reveal knowledge about the data.	
Web search	Retrieval from a domain of content	
	exposed to a single or multiple Web	
	sites.	
XML	Acronym for eXtensible Markup	
	Language. An infinity customizable	
	markup language for defining the	
	metatags, descriptions of kinds of	
	content within or applied to a	
	domain of content.
